GRACE WANJIKU KIBOI

Curriculum Vitae

I am a passionate and detail-oriented software engineering graduate with a strong interest in web development, user-focused design, and open-source collaboration. My journey in tech has been shaped by continuous learning, hands-on practice, and a commitment to building solutions that are both functional and impactful. Through academic work and self-initiated projects on GitHub, I've developed the discipline, technical skills, and teamwork needed to thrive in real-world development environments.

Skills & abilities

I have hands-on experience with HTML, CSS, JavaScript, Git, and GitHub. My GitHub showcases projects like a news aggregator and a blockchain-based dApp, which reflect my ability to build complete, functional web applications. I value writing clean code, learning independently, and working systematically.

Communication

Clear and thoughtful communicator both in writing and teamwork. I prioritize documentation and shared understanding in group settings.

Leadership

Led group projects and assisted peers navigate GitHub. My leadership approach is inclusive and focused on encouraging growth in others while maintaining a strong sense of accountability and teamwork.

Education

Murang'a University of Technology   Expected graduation: August 2025

Bachelor of science in software Engineering

Relevant coursework includes Machine learning, Web development, Artificial intelligence, Mobile application development, Software quality assurance and Database Management.

Projects

Auto-News (News Aggregator Web App)

Developed a responsive news platform that fetches and displays articles from various sources. Focused on layout, user experience, and content rendering.
Technologies: HTML, CSS, JavaScript

Mongolia Web3 dApp

Built a decentralized application integrated with blockchain features. The project explored Web3 fundamentals and smart contract interaction.
Technologies: JavaScript, Web3.js, HTML/CSS

Quotes Generator Web App

Created a simple web app that displays random quotes each time a button is clicked. Focused on DOM manipulation and event handling.
Technologies: HTML, CSS, JavaScript
